SUMMARY

Second-year Data Science student with hands-on experience building end-to-end machine learning pipelines, from data ingestion to model deployment. Comfortable working across Python, SQL, and cloud-based data tooling, with a strong interest in NLP and recommendation systems.

SKILLS

Python, Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, SQL, Apache Airflow, Docker, Git, FastAPI, Streamlit, Power BI, AWS S3/EC2, Jupyter

EXPERIENCE

Data Analyst Intern — Vermeg

Jun 2025 – Aug 2025 · Tunis, Tunisia

- Built ETL pipelines with Apache Airflow to consolidate financial transaction data from 4 internal sources.
- Developed a churn-prediction model (XGBoost) reaching 0.84 AUC, presented to the product team.
- Automated weekly reporting dashboards in Power BI, cutting manual reporting time by 6 hours per week.

Machine Learning Trainee — InstaDeep

Jan 2025 – Mar 2025 · Tunis, Tunisia

- Fine-tuned a DistilBERT model for French-language sentiment classification on customer feedback data.
- Contributed to internal data-labeling tooling used by the annotation team.

PROJECTS

Movie Recommendation Engine

Python, Scikit-learn, Surprise, Flask

Collaborative-filtering recommender trained on the MovieLens dataset, served via a Flask API with a simple React front end for demoing recommendations.

Tunisian Dialect Sentiment Classifier

PyTorch, AraBERT, Selenium

Scraped and labeled a dataset of Tunisian-dialect social media comments, then fine-tuned AraBERT to classify sentiment, reaching 79% accuracy on a held-out test set.

Real-Time Sales Dashboard

Kafka, dbt, PostgreSQL, Streamlit

Streaming pipeline ingesting simulated point-of-sale events through Kafka, transformed with dbt, and visualized live in a Streamlit dashboard.

EDUCATION

B.Sc. in Data Science (2nd year) — ESPRIT, Tunis (2024 – present)

LANGUAGES

Arabic (native), French (fluent), English (professional working proficiency)
