amina.trabelsi@example-mail.com | +216 55 987 321 | Sousse, Tunisia | github.com/amina-sec

SUMMARY

Second-year Software Engineering student specializing in cybersecurity and cloud infrastructure. Experience with vulnerability assessment, container security, and CI/CD pipeline hardening. Comfortable operating across Linux environments and infrastructure-as-code tooling.

SKILLS

Python, Bash, Kubernetes, Docker, Terraform, AWS (IAM, VPC, EKS), Nmap, Burp Suite, Wireshark, GitHub Actions, Ansible, OWASP ZAP, SIEM basics (Splunk)

EXPERIENCE

Cybersecurity Intern — Tunisie Telecom

Jul 2025 – Sep 2025 · Tunis, Tunisia

- Performed vulnerability scans on internal web applications using Nmap and OWASP ZAP, documenting 12 findings.
- Assisted in hardening firewall rules and access policies across 3 internal network segments.
- Wrote internal documentation on secure configuration baselines for Linux servers.

DevOps Intern — Expensya

Feb 2025 – Apr 2025 · Ariana, Tunisia

- Migrated a legacy deployment script into a GitHub Actions CI/CD pipeline with automated security scanning.
- Containerized 2 internal microservices with Docker and deployed them to a Kubernetes staging cluster.

PROJECTS

Automated Pentest Reconnaissance Toolkit

Python, Nmap, Shodan API

CLI tool automating subdomain enumeration, port scanning, and service fingerprinting, generating a consolidated Markdown report for pentest engagements.

Secure CI/CD Pipeline Template

GitHub Actions, Trivy, Terraform

Reusable pipeline template embedding container image scanning (Trivy) and infrastructure drift detection before any Terraform apply reaches production.

Home Lab SOC Simulation

Splunk, Suricata, pfSense

Built a small home-lab environment simulating a SOC workflow: network IDS alerts routed into Splunk dashboards for triage practice.

EDUCATION

B.Sc. in Software Engineering (2nd year) — ENSI, Manouba (2024 – present)

LANGUAGES

Arabic (native), French (fluent), English (fluent)
